

## Function rotary switches

Standard setting ex factory.

## Typical connection

If $(N)$ is connected, the zero passage switching is active.

Technical data page 14-9. Housing for operating instructions GBA14, see accessoirs, chapter Z.

## AR12DX-230V

1 CO contact potential free $16 \mathrm{~A} / 250 \mathrm{~V} \mathrm{AC}$. 230 V LED lamps up to 200 W , incandescent lamp load 2300 W. Standby loss 0.8 watt only.

Modular device for DIN 60715 TH35 rail mounting. 1 module $=18 \mathrm{~mm}$ wide, 58 mm deep.
With the patented Eltako Duplex technology (DX) the normally potential-free contacts can still switch in zero passage when switching 230 VAC 50 Hz and therefore drastically reduce wear. Simply connect the neutral conductor to the terminal $(N)$ and $L$ to $1(L)$ for this. This gives an additional standby consumption of only 0.1 watt.
If the contact is used for controlling switching devices which do not perform zero passage switching themselves, $(\mathrm{N}$ ) should not be connected because the additional closing delay otherwise causes the opposite effect.
With an internal toroidal-core current transformer the single phase AC current flowing through a consumer V 1 of 0.1 A up to max. 32 A is compared to the setpoint. When the latter is exceeded a relay switches off a consumer V2 connected to 2 within 0.5 seconds or switches on a consumer V3 connected to 3.
Adjustment accuracy $\pm 5 \%$. From 25 A the relay always switches on.
State-of-the-art hybrid technology combines advantages of nonwearing electronic control with high capacity of special relays.
The basis of current $\mathbf{A}$ will be set with the lower rotary switch $\mathbf{A}$.
The following basic values can be selected: $0.1 \mathrm{~A}, 0.3 \mathrm{~A}, 0.6 \mathrm{~A}, 0.9 \mathrm{~A}, 1.5 \mathrm{~A}, 1.9 \mathrm{~A}, 3.0 \mathrm{~A}$ and 3.2 A .
The multiplier $\mathbf{x A}$ will be set with the middle rotary switch $\mathbf{x A}$ and offers values between 1 and 10 . So currents starting from 0.1 A (basis of current 0.1 A and multiplier 1) can be set.
OFF delay RV can be set with the upper rotary switch RV between 0 and 120 secs.
The hysteresis is defined as approx. 25\%.
Status indication by LED.
The measuring input M1-M2 is electrically isolated from power supply L-N and make contact 1(L)-2/3.
Reference values larger than 32 A can be adapted by an external measuring transformer.
