

World's first no-code IIoT platform

IXON offers an end-to-end IIoT solution for all your remote service and maintenance needs:
from hardware to the cloud.

IXON aims to stimulate and aid in the IIoT transition among machine builders by providing a secure cloud environment with **all the technology needed to make IIoT directly accessible** to every machine builder worldwide. Experience better collaboration, future

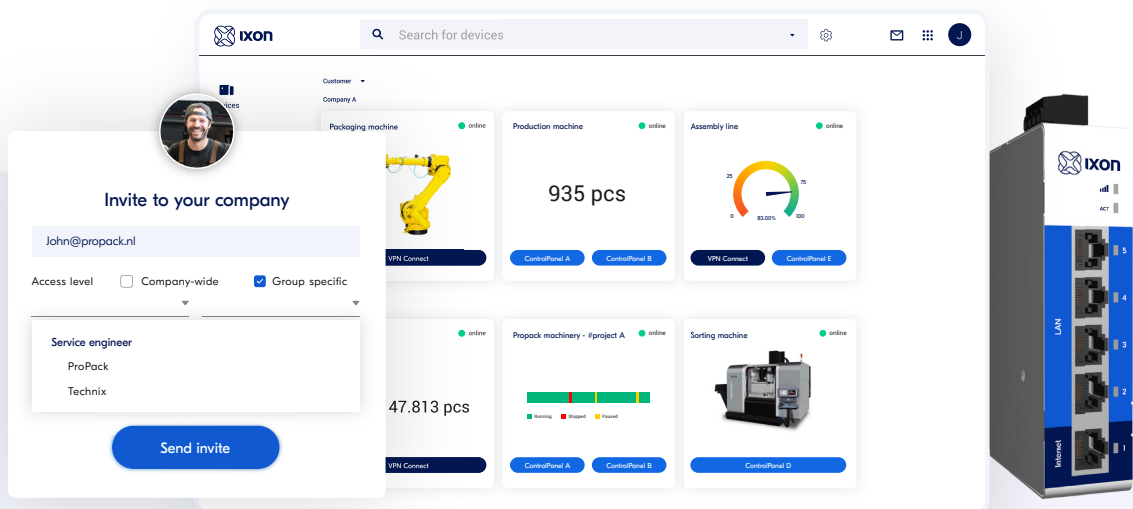

growth and faster development - and benefit from even **more freedom to set up and customise the platform** to best fit your specific needs. With IXON Cloud you will continue to add value for your customers throughout the entire life cycle of your machines.

The Industrial IoT solution that grows with you

IXON's all-in-one solution helps machine builders with the step-by-step implementation of IIoT. The complete IXON solution consists of a variety of features that fit the full digital transformation journey.

It's designed to allow a quick and easy start with connectivity and offers additional features every step along the way towards full IIoT maturity.

Collaborate from your own service portal

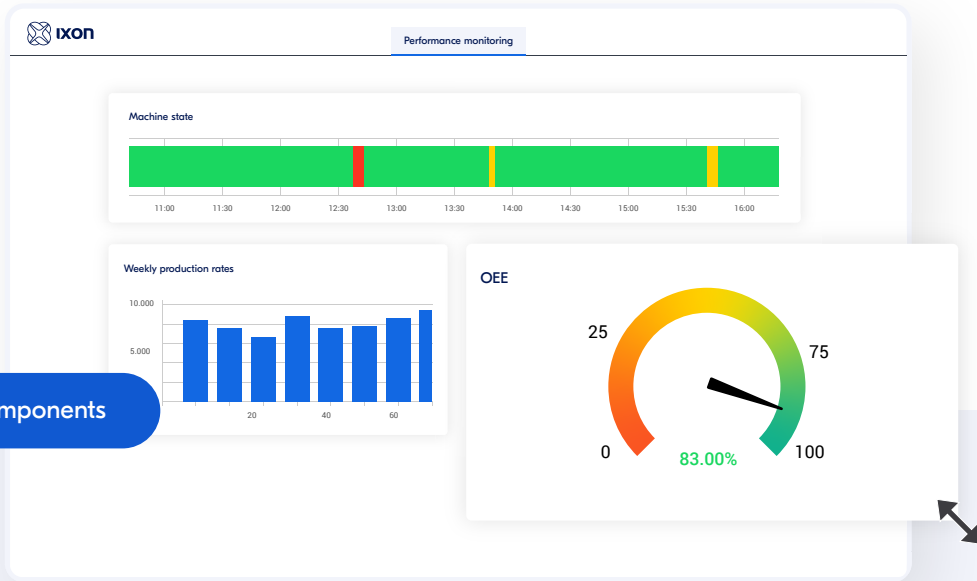

Collaborate with customers and partners from your own service portal to monitor and optimise your machines. Manage all your machines and users from your own web portal. IXON Cloud is accessible anytime, anywhere and can be fully personalised according to your wishes.

- Fleet manager
- User rights and access management
- White labelling

Efficient remote service

Connect your machines, reduce unplanned machine downtime and take your service to the next level with remote access. IXON Cloud offers all the possibilities to remotely program, commission and monitor your industrial devices safely.

- Connectivity products
- Remote access (VPN, VNC, HTTP)

Add components

Improve machine performance and predict maintenance

Analyse and optimise systems and customer processes using machine data. Present fault codes and performance in dividable machine dashboards. Take action only when needed and predict maintenance with alarms. All easily set up in IXON Cloud without a single line of code.

- Cloud data logging
- Data visualisation studio
- Alarms

Continue building on a powerful foundation

IXON Cloud is an open and expandable Industrial IoT platform. Accelerate the development of your own IIoT project and combine the power of a proven standard with the unique capabilities of a custom application. Integrate with external systems (CRM, ERP) and build your custom app on top of a solid and secure foundation.

- Custom in-app components
- API
- Integrations

Used by 2,500+ machine manufacturers
